

Competition Law and Patents: A Follow-on Innovation Perspective in the Biopharmaceutical Industry (New Horizons in Competition Law and Economics)

Using the example of research tools in biopharmaceutical research and innovation, this book examines the complexities of the relationship two fundamental areas of law and policy - intellectual property rights and competition law. It addresses a question that is certain to become paramount in other industries also: how to strike the balance between initial and follow-on innovation so as to ensure that access to essential research tools (or other fundamental elements to follow-on innovation) is not impeded. The book concludes by suggesting how competition law could be used to complement the patent balance. Competition Law and Patents caters for various groups ranging from those with a general interest in competition law, patent law and/or biopharmaceuticals, to students who want to understand how competition and intellectual property work in practice (or to understand the interface between the two policies), and from practitioners and policymakers to people within the biopharmaceutical industry itself.
