

Composting: A Complete Guide To Composting and Creating Your Own Compost

Composting - The Complete Guide To Composting and Creating Your Own Compost Would you like to know more about Composting and how to create you own? When I first started to take my gardening seriously I was not worried about producing my own compost. I thought it was easier to go to my local nursery and buy some. As my garden grew however, I began to see the value in making compost, not only saving money but also ensuring that my soil was in the best condition possible. Composting is a completely natural process in which organic material is left to decay over a period of time. This organic material, which can include garden waste, manure or kitchen scraps, becomes a dark substance, often called humus or black gold. In nature, this process happens naturally over a period of time, but with certain techniques it can be speeded up for use in home gardens. The aim of this book is to help you determine which Composting strategies will work best for you, and if you follow the steps Ive outlined you should be producing excellent black gold in no time!
