

## Your Child's Body Language

A great deal of time is spent teaching children the skills of language - how to speak, how to read, how to write. Too often non-verbal interaction is ignored, at a cost. It is no wonder that misunderstanding and miscommunication occurs, cut off as adults are from the full communication of body language. Suitable for parents and teachers of young children and adolescents, this book offers three things: a way of learning, step-by-step, to read between the lines of what children say; a method of communicating more fully with children through improving one's body language; and teaching children non-verbal effectiveness. The approach is practical and should be most useful when it is used as a springboard to act - to approach children in a whole new way, to understand fascinating new things about them and to teach them new methods of dealing with the world. The reader will learn to read, interpret and be more self-aware. A resources section includes the contact details of a broad range of useful Australian organizations, helping readers to follow up on what they read.
