

## Michael Bell: Space Replaces Us

Since 1988, New York-based architect Michael Bell has created a series of projects and essays that explore architectural and urban design for California, New York, and Texas -- the three most populous regions of the United States and, coincidentally, the three states in which he has lived and practiced. The first monograph on the architect, *Michael Bell: Space Replaces Us; Essays and Projects on the City*, includes both design work and writings. Bell has organized and designed two important installations, both of which include his work: *Endspace: Michael Bell and Hans Hofmann*, at the University Art Museum, Berkeley, and *16 Houses: Owning a House in the City*, at DiverseWorks in Houston, which featured his seminal *Glass House @ 2 Degrees*. Other projects included are an urban renewal scheme for a huge site in Far Rockaway, New York, and a series of residential projects, including the *Ghent House*, a modernist glass house currently under construction in upstate New York. Complementing the design projects are three major essays: *Having Heard Mathematics: The Topologies of Boxing*, *Eyes in the Heat: RSE*, and *New York City*.
