

# Newbies Guide to Patents for Inventions.: How to Protect Your Inventive Ideas

Description. People often have good ideas, some of which are better than others.

Many of these good ideas are generated from genuine flashes of inspiration; others are formed from a desire to improve a known procedure. Thus with such a procedure one might very well think that there must be a better way of doing this!, and then proceed to try out various methods to improve that procedure. Such an improved procedure, if new and unobvious, might well be worth producing and selling commercially by the inventor. If that improved procedure should prove to be commercially successful, there is a very real risk that someone may try to copy that procedure and sell it at a lower price, thus undercutting the inventors market in the procedure. The inventor needs to know how to protect his (or her) inventive ideas at an early stage before attempting to commercially develop these inventive ideas. A powerful way of providing protection for inventive ideas is by patenting those inventive ideas. Newbies Guide to Patents for Inventions provides useful advice and information to inventors on the procedures involved in obtaining patents for inventions in the United Kingdom, Europe and the U.S.A. This guide sets out all the necessary stages in patenting an invention, from filing a patent application through to the grant of a patent on the invention. A thorough study of the contents of this guide should help the inventor understand the involved procedures required to protect an inventive idea by a patent. Booklet contains 46 Kindle pages.
