

Innovate Like Apple: How Apple Inc Gets More Value Out of the Australian Patents System

In Australia, Apple has devised a unique patenting strategy which results in faster, stronger and cheaper patents than those awarded to any other company. Many of the patents in Apples Australian patent portfolio are: Granted, examined and certified quickly (usually in less than six months from application); Cheaper to obtain than standard patents; Extremely resistant to invalidation proceedings, because they cannot be attacked on the ground of obviousness; and Retrospective in operation: the patentee can get damages for infringements which occurred even before the patent application was filed. Apple is not the most prolific filer of Australian patent applications, but its patent strategy, which involves obtaining both innovation patents and standard patents, arguably gives the company the strongest patent portfolio in Australia. This book shows how Apple does it, and how other patent applicants can obtain the same advantages if they wish to do so.
