

Wheels* (Notes) ... (a Greek Design)

(NOTE: This is an empty notebook for storing text only notes ... It is designed to take almost no space.) Is your world incomplete without wheels. Do you always have some car, truck, bike or other wheely project in your head? Do you like to keep track of things like maintenance schedules and purchase prices for all of your many acquisitions? This document was designed for you because you can design your document. The categories are: (Wheels) parking lots Naught to Nine (with spots A to Z). The structure of the document allows you to break down the categories into things like: individual sets of wheels and related information, parts prices, contacts, auction information, maintenance schedules, etc. Obviously with the word Wheels ... you can choose the categories that make sense to you. Id just take the time to make a note of your categories on the numbers line. That way you can search for your category by the numbers and for your information through your notes. The advantage of having a published document where you can park notes is that its easy to find and the information is stored in your {My Clippings} file - a text file which can be backed up regularly (recommended w/ something like MyClippings_date(txt)) on your computer or simply synced with the document if its on your computer. Beware: when you insert notes, you MUST make sure you save them and they are easy to delete and easy to overwrite (but great to have!). When you enter them, remember that the note number will most often show up AFTER the word (dont add notes at the END of the line). YOU want to put your cursor BEFORE the word/symbol and MAKE SURE that no other note is BEHIND the word/symbol (or highlighted word). Its possible to overwrite a note you dont see on the bottom or side of the screen if you dont pay attention to how they get stored. Just pay attention. My thanks and

yours should go to a Liam Quin (fromoldbooks(org)) for inspiring the design.
